DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 28 February 2008 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. **Claims 1, 2, 6, 8-10, 18-21, 24, 26-28, 36-38, 42, 44-46, and 54-56 are rejected under 35 U.S.C. 102(b) as being anticipated by Rasmussen (5,324,304).**

Rasmussen reference discloses a filter having primary filter struts (2, see figure 6) and secondary filter struts. The primary struts have a first curved portion and a second curved portion (see annotated figure below). Each primary strut has two secondary struts attached thereto. The secondary struts are a continuation of the first curved portion of the primary struts.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. **Claims 11, 13, 15, 16, 29, 31, 33, 34, 47, 49, 51, and 52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rasmussen (5,324,304).** Rasmussen reference does not disclose the diameter of the primary and secondary struts, the filter expanded diameter, and the filter length. It would have been obvious to one having ordinary skill in the art at the time the invention was made to size the filter struts and length as claimed, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

6. **Claims 12, 14, 30, 32, 48, and 50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rasmussen (5,324,304) in view of Kim et al. (5,836,969).** Rasmussen reference does not disclose the struts are superelastic. Attention is drawn to Kim reference, which teaches making the struts of a filter superelastic (see column 7, lines 4-8) to make the struts extremely flexible. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made make the struts of the filter of Rasmussen reference superelastic, as taught by Kim reference, to make the struts extremely flexible.

Response to Arguments
